

# Off-Chain Solution for Tokenization

## Project Pleiades

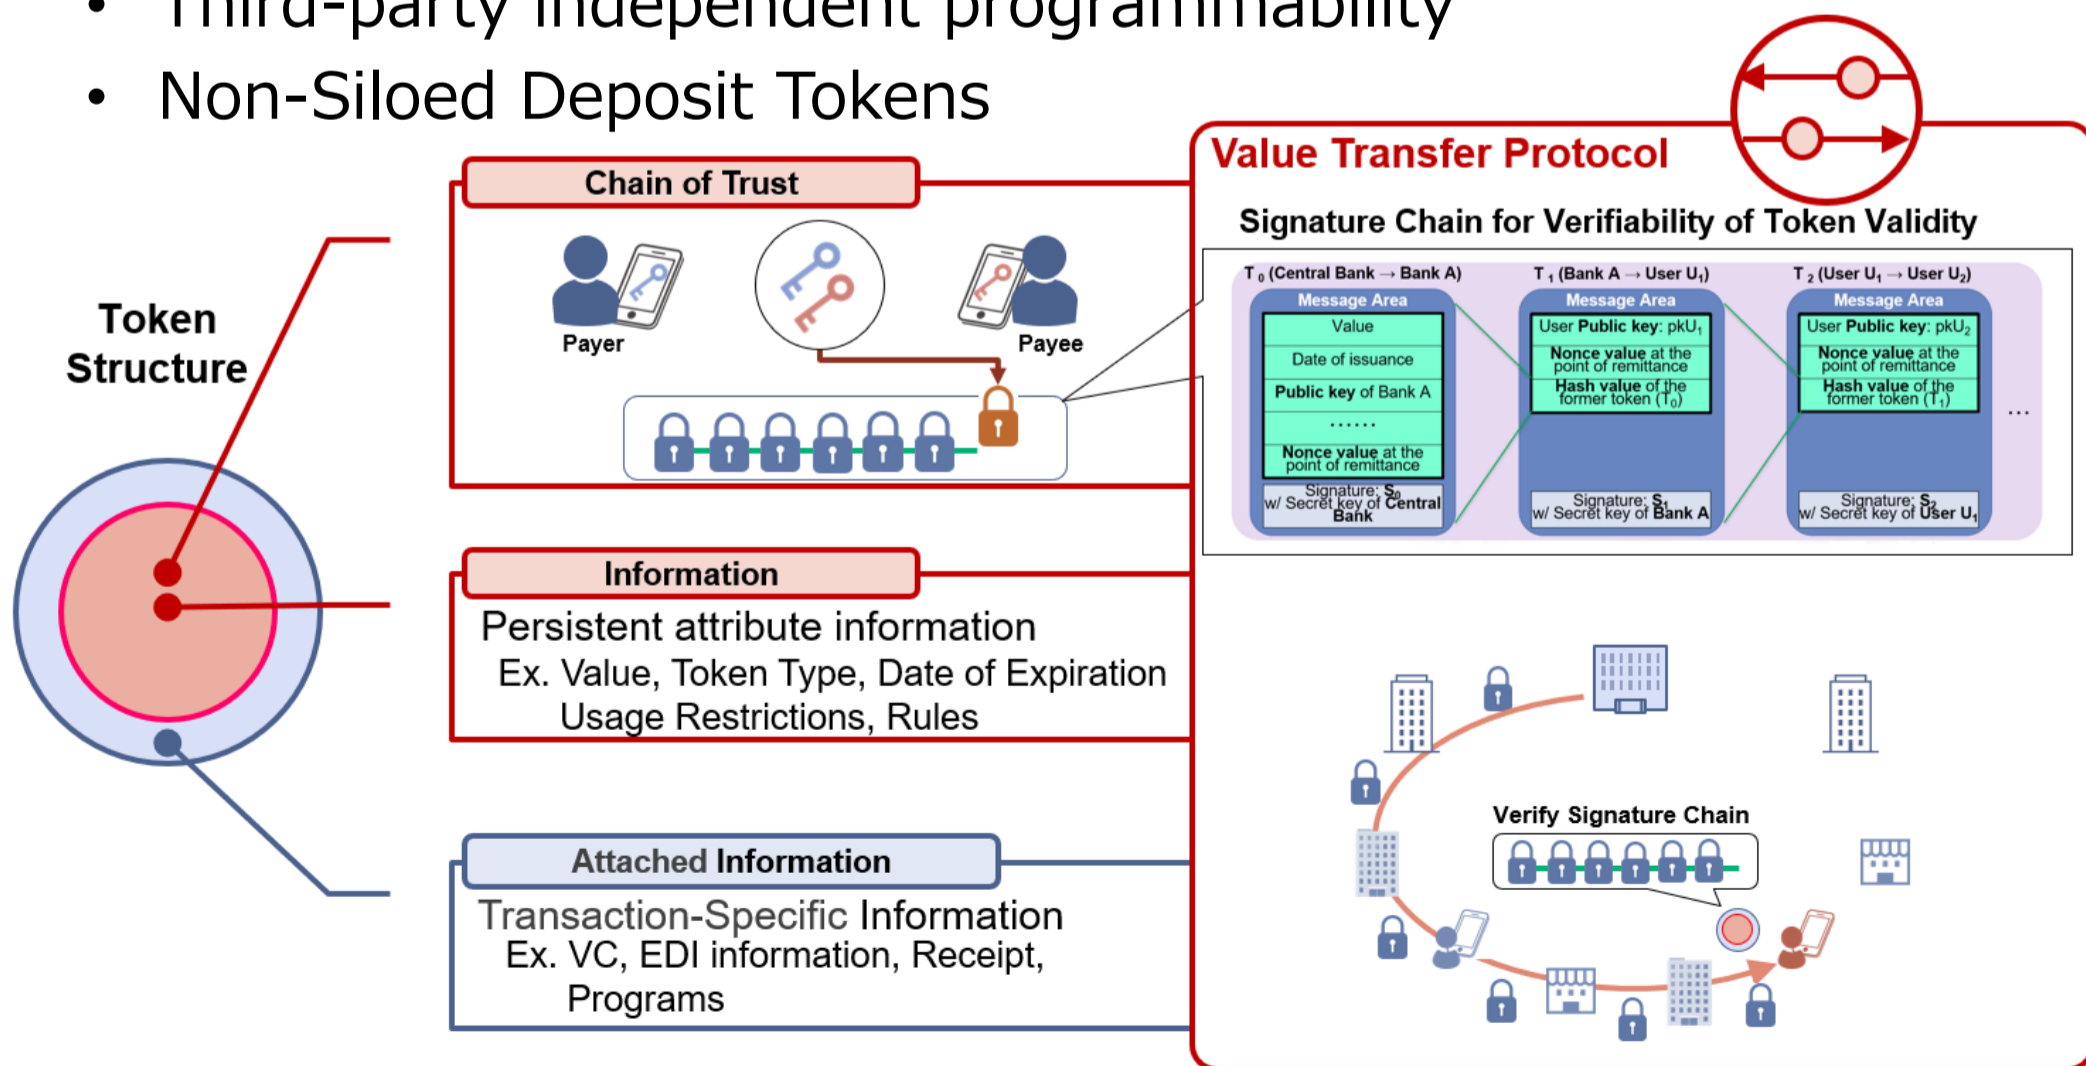

Pleiades enables the secure transfer of tokenized value from device to device directly

- De-Siloization and Improved liquidity
- Highly flexible programmability
- Cost reduction
- Scalability

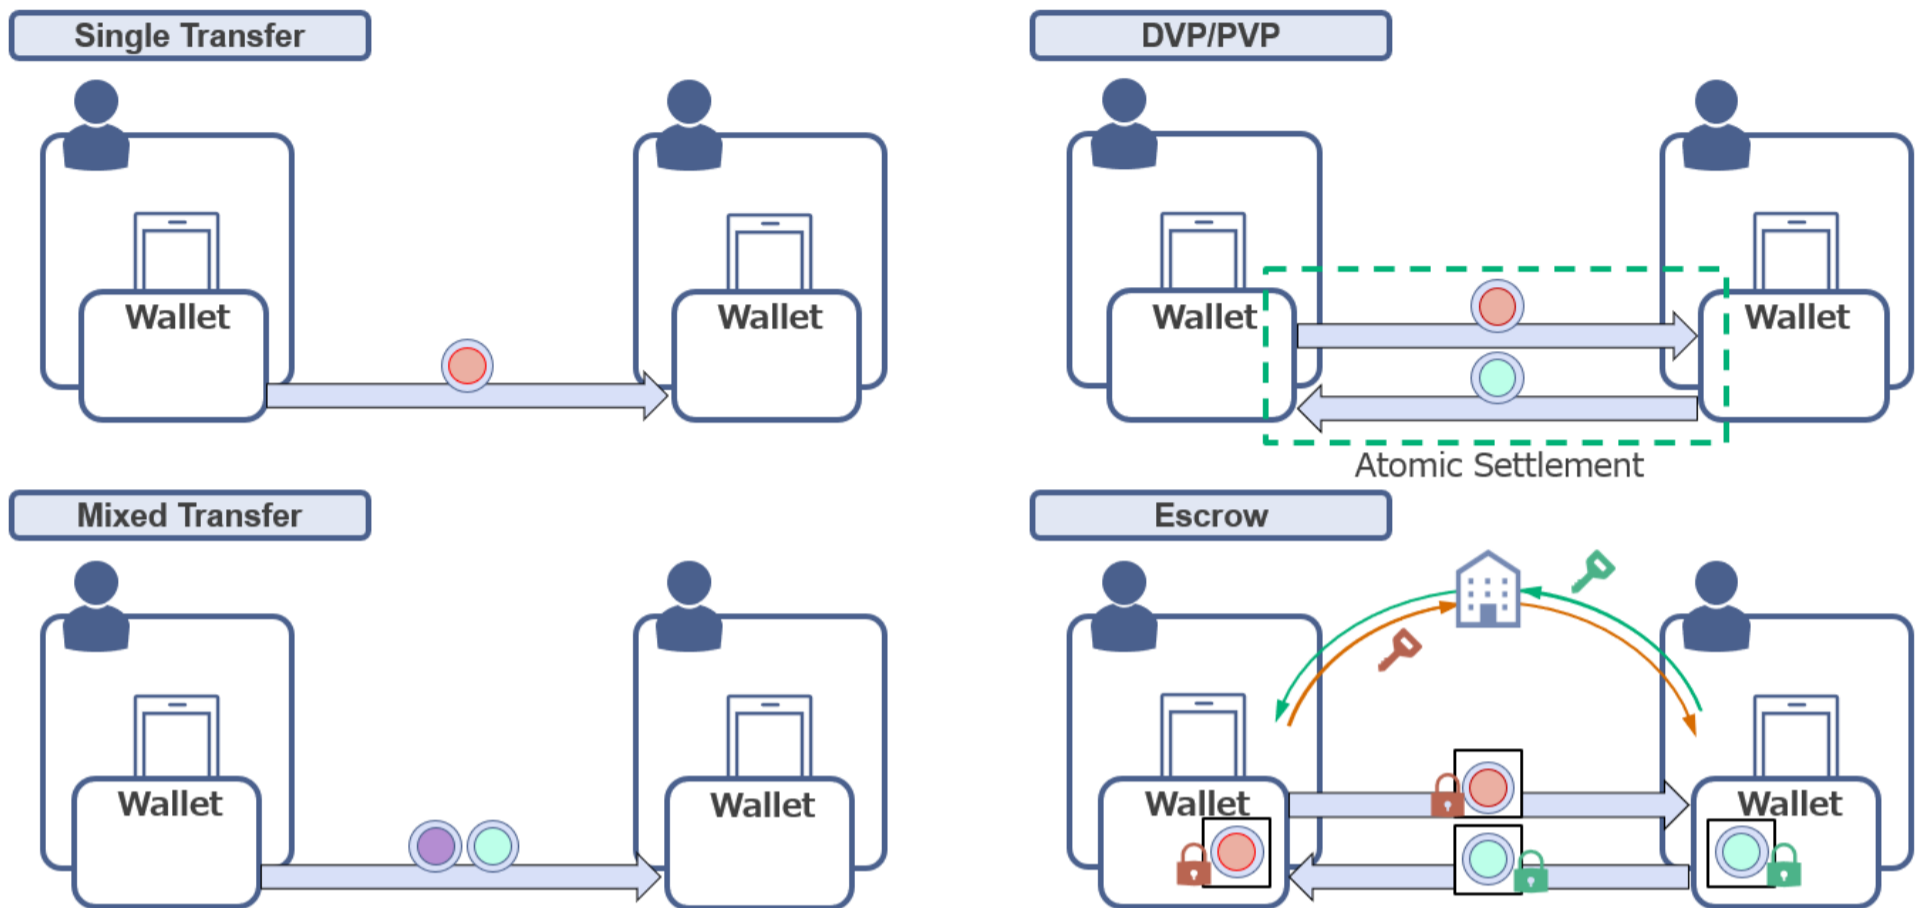

### Not a Platform but a Protocol

Value transfer Protocol :

- Tokenized Value (Chain of Trust/Persistent or Transaction Specific Information)
- Third-party independent programmability
- Non-Siloed Deposit Tokens

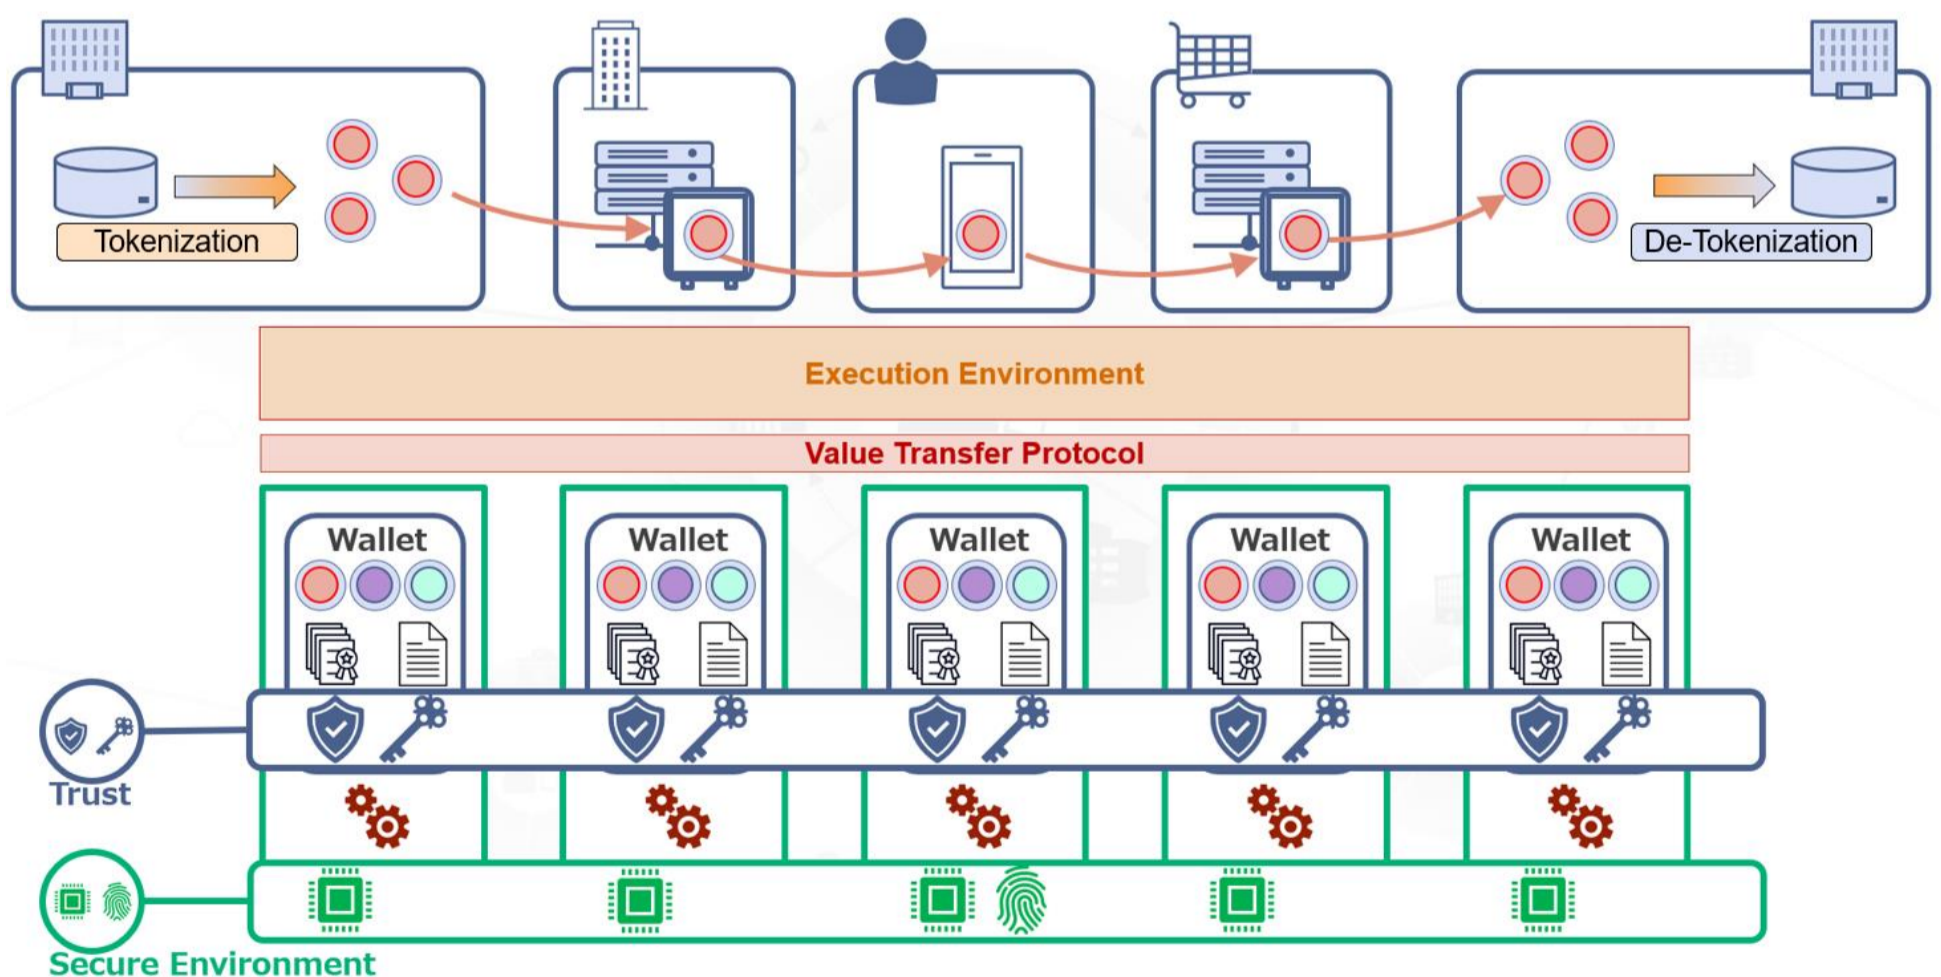

## Beyond "Ledger Technologies" : Various settlement methods

## Digital Identity Wallet for the Financial Domain

- Wallet for Various value tokens, VC, Personal Information, etc.
- Aggregation and self-control of privacy information into wallets
- "Trust Anchor" in devices protected by Secure Elements
